

CARE INSTRUCTIONS

for vonRickenbach SolidWood products in oak and walnut

CONGRATULATIONS!

You are now the proud owner of a product manufactured by vonRickenbach SolidWood.

Our solid wood products leave the factory with a high-quality, natural surface treatment.

Please follow these care instructions for enduring pleasure from your product:

CARE

Keep the product clean by occasionally wiping with a lightly damp cloth.

Please note: do not use microfaser cloths as these lift the oil and wax from the wood surface.

WHEN IS FURTHER TREATMENT REQUIRED?

- when the surface looks faded
- when the wood looks dry and feels rough
- when the surface has light scratches

We recommend attention by a specialist for more serious damage.

HOW TO TREAT THE WOOD?

Please use the care solution provided or order from vonRickenbach SolidWood.

Apply the care solution sparingly with a white cotton cloth.

Rub the solution evenly into the surface of the wood and polish with a clean dry cloth.

Remove surplus solution from the surface of the wood with a rag.

Do not allow surplus solution to dry on the wood surface.

CAUTION

After use always store the solution cloth in a sealable tin or screw-top jar (risk of self-ignition).
